

**Stand-on platform
for flexible operation**

**ProTrac for traction and
stability in all situations**

**Sensitive lifting/lowering
through Proportional Hydraulics**

**Electric tiller steering (optional)
for effortless steering**

ERC 212/214/216

Electric pedestrian operated stacker (1200/1400/1600 kg)

The Jungheinrich ERC 212/214/216 is a combination of manoeuvrable pedestrian stacker and fast, comfortable stand-on truck.

As a pedestrian stacker, the ERC provides:

- Excellent visibility through the slender mast,
- Comfortable operation of lifting/lowering function from the tiller head,
- Depositing in racking locations up to 5350 mm (ERC 214),
- Safe 4-point wheel traction during stacking and retrieval through hydraulic locking of support wheels,
- Sensitive lifting and lowering speed control through Jungheinrich Proportional Hy-

draulics – e.g. for precise and gentle depositing of the load in the racking.

And if space becomes tight during stacking or, for example, during load pick-up in lorries, the operator stand-on platform and side guards are simply folded away and the ERC is transformed back into a space-saving pedestrian truck. The low height of the stand-on platform ensures effortless and fast mounting and dismounting.

As a stand-on truck, the ERC provides:

- Economically efficient goods throughput/transport over longer distances,

- Excellent operator comfort and ergonomics through cushioned stand-on platform,
- Safe traction also on uneven floors through "ProTrac",
- Easy handling/control through electric steering (optional).

No matter in what application the truck is just being used: Batteries up to a capacity of 375 Ah and the possibility to remove the battery from the side for multi-shift operation (optional) ensure that the truck is operational long enough even in the hardest applications.

This specification sheet according to VDI regulation 2198 only provides technical values for the standard truck. Non-standard tyres, different masts, additional equipment, etc. could produce other values. Right reserved for technical changes and improvements.

Make use of the advantages

ERC 212 with stand-on platform folded up/down

Flexible application opportunities

Various platform types provide different utilisation opportunities:

Type 1: foldable stand-on platform without side supports (ERC 212)

- Pedestrian operation.
- Maximum travel speed (6 km/h) with folded down stand-on platform.
- Reduced travel speed (4.4 km/h) with stand-on platform folded up.

Type 2: foldable stand-on platform with side supports (ERC 214/216)

- Pedestrian/stand-on operation.
- Reduced travel speed (6 km/h) with folded in side supports.
- Reduced travel speed (4.4 km/h) in pedestrian operation.

Powerful drive motor and "intelligent" controls

Advanced drive technology with powerful 2 kW shunt-wound drive motor (KB 60 min) and control electronics (SpeedControl) ensure safe travel characteristics. Adjustable to every application:

- The determined travel speed is maintained in every travel situation – even on ascending/descending gradients.

- Individually adjustable travel parameters facilitate optimum adjustment to every requirement.
- Energy reclamation through regenerative braking on taking back the travel speed.
- 2-year warranty on drive motor.

Comfortable stacking and retrieval

All lifting and lowering functions are comfortably controlled from the tiller head without the need to turn round. Here the Jungheinrich Proportional Hydraulics facilitate sensitive control of lifting and lowering speed – essential for precise and gentle depositing of loads in the racking or exact positioning of the load for stacking in. In confined spaces, stand-on platform and side guards are simply folded in and the ERC is used in pedestrian mode. The low height of the platform ensures easy mounting/dismounting.

Retrieval with the ERC

Optimum traction at any time

Jungheinrich-ProTrac optimises traction on the drive wheel. A spring cushioned system in the support wheel prevents the drive wheel from skidding on uneven floors. ProTrac provides stability on all four wheels during stacking and retrieval through hydraulic locking of the support wheel from 1800 mm lift height.

Buttons for sensitive lifting and lowering as well as horn

Comfortable and safe operation

- The electric tiller steering (optional) reduces tiller movement during straight travel. The advantage: directional stability during straight travel. Also, low steering forces ensure fatigue-free operation.
- The buttons on the tiller for sensitive lifting and lowering have different shapes. The operator "feels" the button he has pressed and thus always "keeps his eyes" on the load during stacking and retrieval.
- The sprung stand-on platform absorbs even severe track unevenness and thus relieves any strain on the operator's back.

Long operating times

Battery capacities up to 375 Ah ensure long operating times:

- 3 EPzS 240 / 3 EPzS 270/345 (375) Ah.
- Sideways battery removal, e.g. for multi-shift operation (optional).

Additional equipment

- "CanDis" and access entitlement "CanCode".
- Cold store version.
- Vertical load guard.
